

LPR V3.1 + DVR V8.31 Resolution Setting

For customers using LPR V3.1 with DVR V8.31 software, pls follow this document to reset the video resolution on GV-DVR, so that GV-LPR could get correct video resolution for accurate recognition.

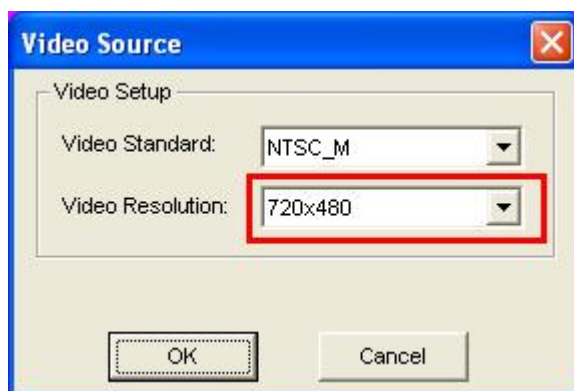

1. Click Configuration button in GV-DVR.

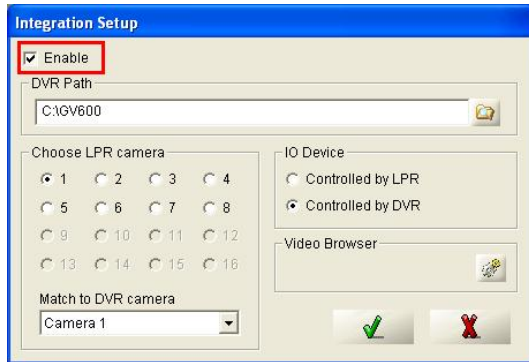

2. Choose A/V Setting => Video Source.

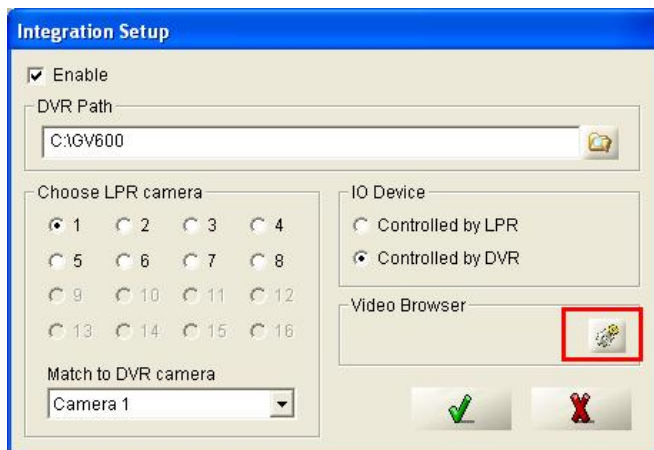

3. Adjust **Video Resolution** >= **D1 (720x 480 for NTSC, 720x 576 for PAL)**, Default setting is CIF format. Click **OK**.

- Run GV-LPR software. Click **Configuration** button => **Integration Setup**. Enable Integration, and assign DVR camera number to LPR camera.

- For Video Playback setting, click **Video Browser** button.

- Choose **Quick search**, save the **User Name** and **Password** of GV-DVR to Local setting. (This would enable GV-LPR to get the playback video from GV-DVR).
