

How to Query Database from a Remote Site

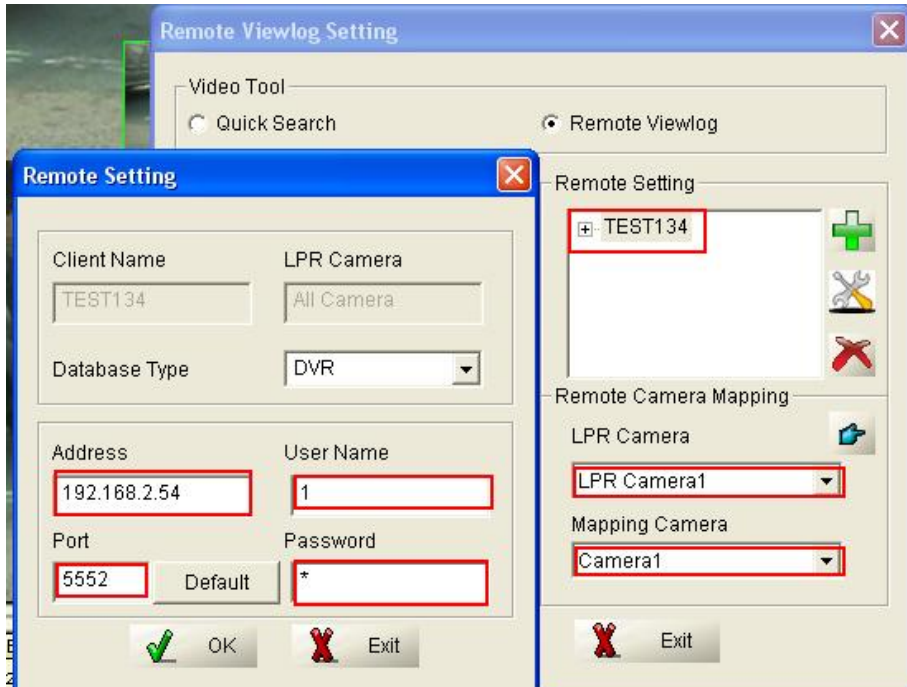

1. Enable Control Center Server, and select Remote Viewlog Service.

2. Choose Video Play Setting in LPR software.

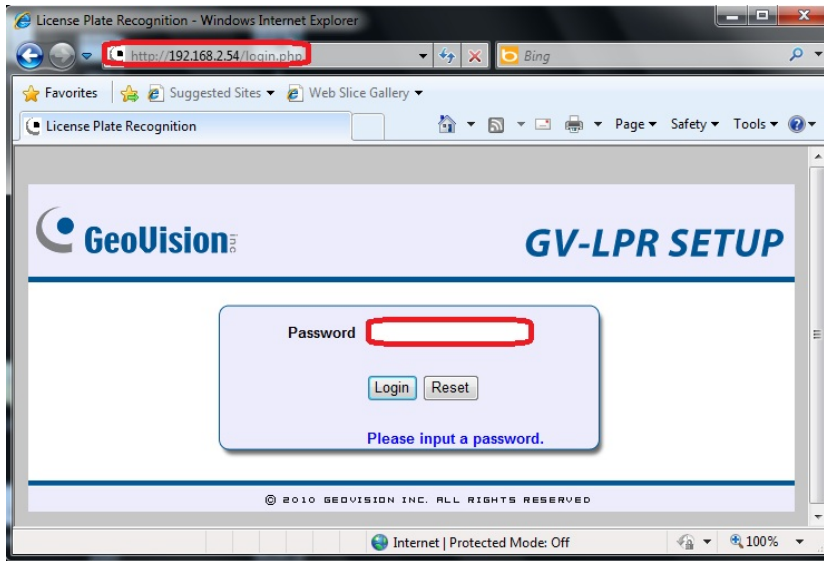

3. A remote Viewlog Setting window pops up. Under video tool, choose **Remote Viewlog** option. In the remote setting, add a host. Type the DVR's IP address, UserID and Passwords for remote playback setup

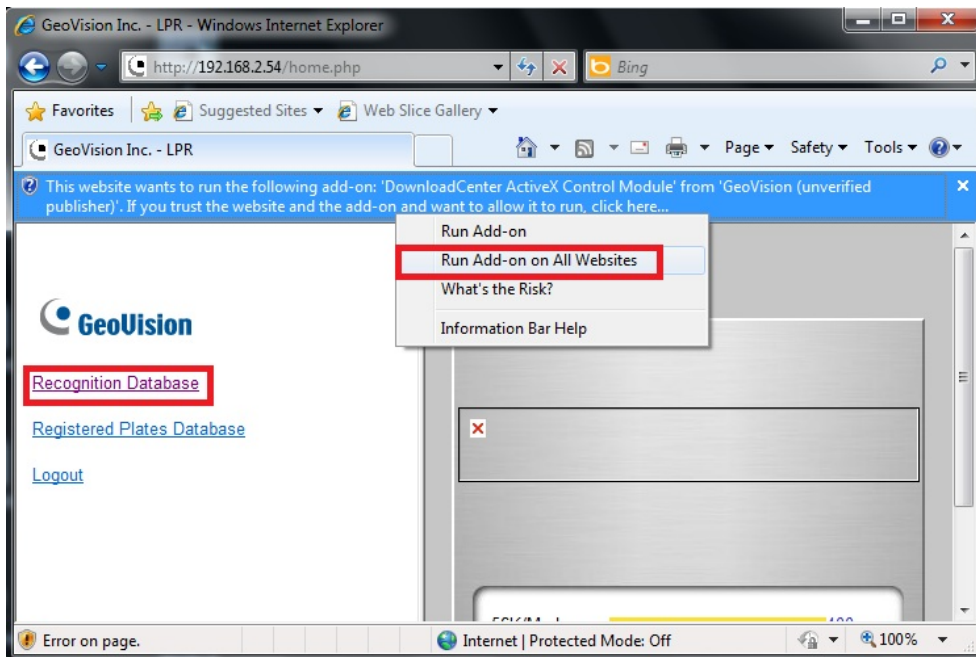

4. Enable Web Server.

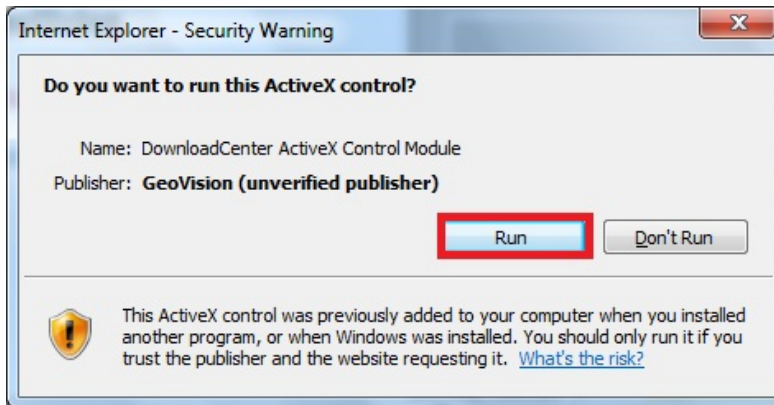

5. On the remote PC, start the IE browser and type LPR's IP address. Then type LPR's UserID and password to login the webpage.

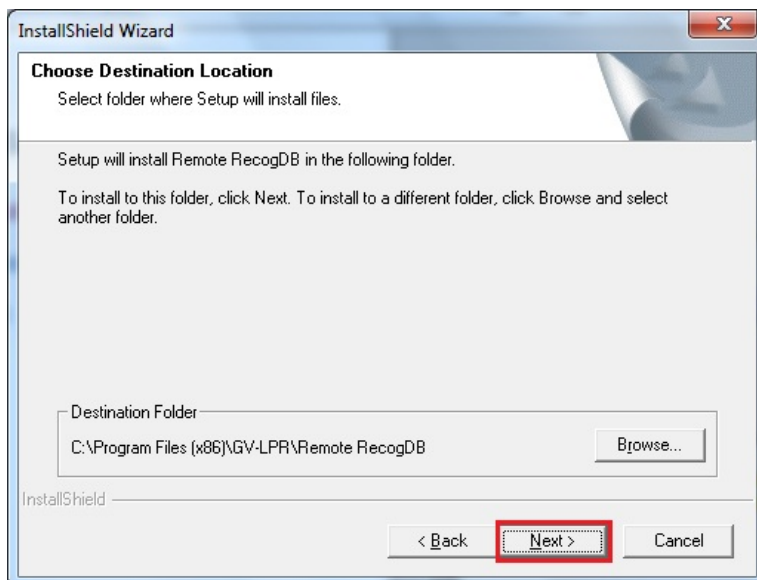

6. Select **Recognition Database** and enable **Run Add-on on All Websites**.

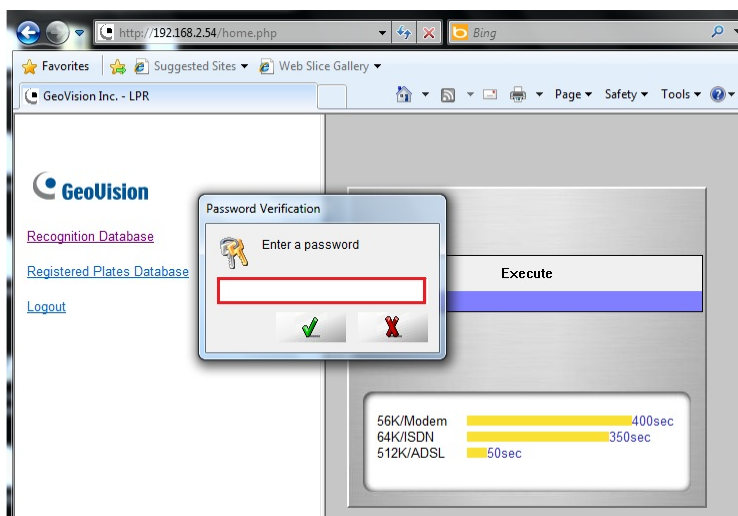

7. A window will pop-up and ask for OCX installation. Click **Run**.

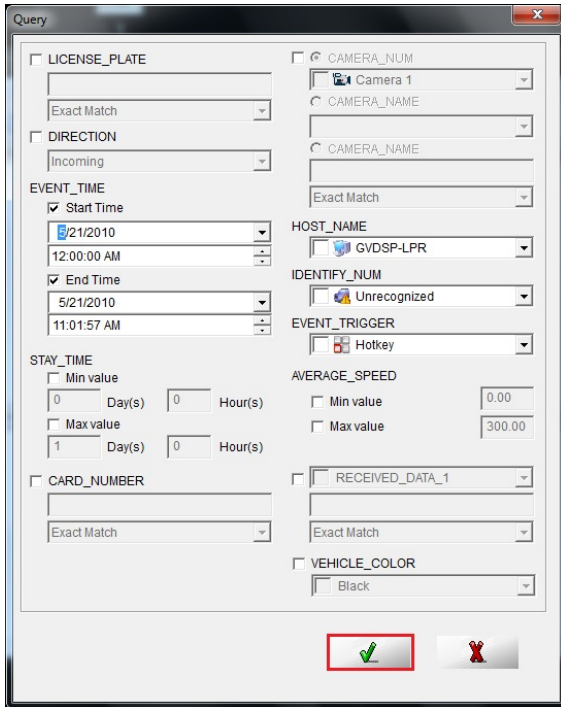

8. Select the destination location for saving Remote RecogDB application. Click **Next**.

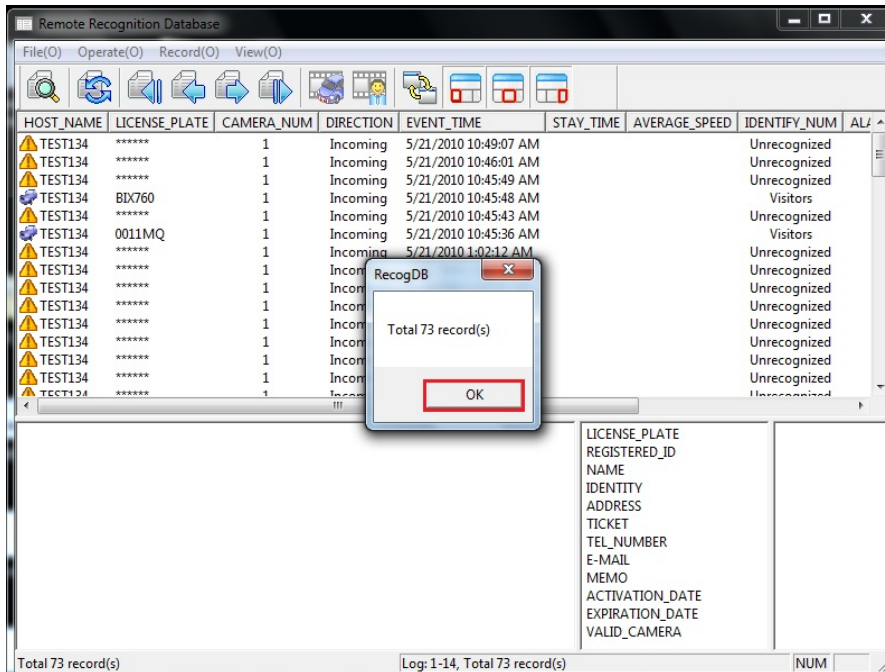

9. After all that, type the password again for confirmation.

10. Select the query option and then click the check button.

11. The query result will be shown as below.

12. Select the related the recognition event, and then click the icon with a car or the icon with a person. Then you will see the video file with an associated recognition event.
